Abstract

“VoiSports” is a sports game which players operate robots by their voices.

This game supports players to communicate more enjoyably through sports with others at academic conference party or developer conference party, when they have drinks or meals and both hands are occupied. Robots are operated by using only player’ s voice elements such as volume, direction, and timing.

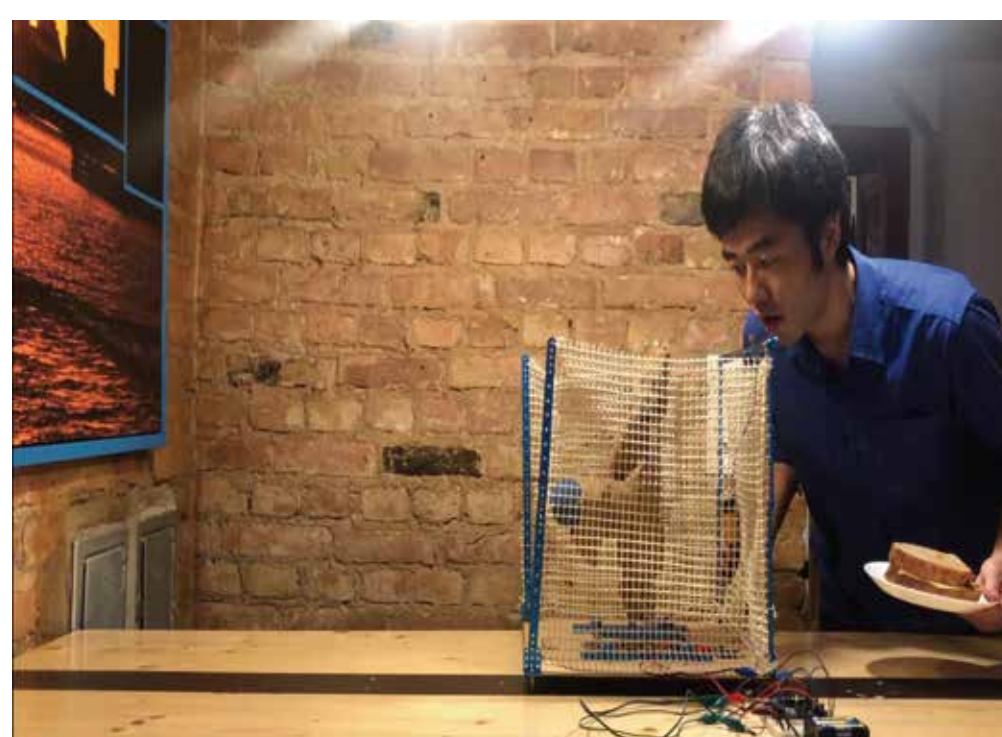

How it works

Hammer throw

This machine continues to rotate as you continue to speak to the microphone and the hammer is thrown when you give a louder voice.

STEP1

When you begin speaking, the hammer starts to spin.

STEP2

Continue to speaking. When you make a bigger voice, this machine throws a hammer.

Archery

When the voice is made to the microphone, the bow turns in that direction, and when a bigger voice is emitted, the arrow is released at that timing.

STEP1

Adjust the direction of the bow according to the direction of voice.

STEP2

Continue to make voice. When you make a loud voice, the arrow is shot.
